

Adhesive 2000

Technical Data Sheet

Description:

Semi-gelled pale yellow liquid with high neoprene content designed to bond rubber to concrete. Adhesive 2000 may be used as a contact adhesive. If a film of Adhesive 2000 dries before assembly is complete, it may be reactivated by wiping the film with toluene or xylene. Viscosity, dry time and color can be modified to fit a particular application.

PHYSICAL PROPERTIES

Color		Beige/yellow
Tensile elongation	%	300
Hardness	Shore A	30
Viscosity	cps	2000
Weight	lb/gal	7.2
Water absorption	%	.5
Base		Polychloroprene
Flash point	°F	< 40
Solvent		Toluene/Acetone

Note: Synthetic materials in contact with this must be resistant to aromatic solvents. Adhesive 2000 is flammable until the film has dried. A 20 mil film will take around 15 minutes to dry.
